Derivation of Graduate Employment Rates

Graduate Employment Rates are to be calculated using the following method. Graduate Employment Rates are based on graduates of OSAP eligible postsecondary diploma programs. The following is the current summary of the objectives of the survey and the basis of calculations.

A -- Graduate Employment Survey

The objectives of the survey are to:

1. identify the proportion of graduates from private vocational programs who sought employment study completion and found employment;
2. develop a data base from which the Graduate Employment Rates are to be calculated;
3. provide information on the labour market experience of graduates from private vocational school programs. The program graduate employment rates will be made available to prospective students.

The key question used to derive the graduate employment rate is:

During the week of _____ were you:

1. Employed or self-employed?
2. Employed or self-employed, but looking for another job?
3. Not employed, but have accepted a job to start shortly?
4. Not employed, but looking for a job?
5. Not employed, but not looking for a job?

Note: Graduates are first asked if they were attending school full-time during the reference week, if yes, they are excluded from the survey questions regarding employment status.

Graduate Employment Rate

Graduate employment is defined as the percentage of graduates in the labour force who are employed during the reference week (i.e. first week of the seventh month following their study completion), where labour force is defined as those employed, those not employed but looking for a job or those not employed but had accepted a job to start shortly.

Employment Rate Formula: $(1+2)/(1+2+3+4)*100$
